

ERGONOMICS & HEALTHCARE: Boost Patient Care through Caregiver Comfort

Discover the link between caregiver comfort and patient care—and how to leverage that connection—in a session that examines ergonomics in the healthcare environment.

Modern healthcare organizations are making tremendous improvements in the quality and cost of patient care by investing in the latest technology, but many are failing to address the human-computer interface.

In this talk, Professor Alan Hedge will shed light on a variety of ergonomics issues as they relate to healthcare IT, including their effects on healthcare personnel and the patient experience. Professor Hedge will explore solutions to the unique ergo challenges of IT-intensive work in the areas of digital radiology, nursing stations, computers on wheels (COWs), patient accounts, and medical records.

ALAN HEDGE, PhD, CPE
FHFES, FErgS, FIEA

Director of the Human Factors and Ergonomics program at Cornell University, Professor Alan Hedge is an extensively published, internationally recognized expert in ergonomics. Professor Hedge has appeared on numerous television shows, including the Today Show,

Weekend Today, the Early Show and NOVA, and has been featured in Time, Business Week, the Wall Street Journal and the New York Times.
